

ABSTRACT

A light fixture for use in low voltage outdoor lighting systems that comprises a cowl, a lamp, a socket positioned within the cowl for holding the lamp and a collar positioned within the cowl. The collar comprises an inner aperture having a diameter large enough to receive a base of the lamp and a perimeter that follows the contours of the inner surface of the cowl. The collar seals the socket and the inner portions of the cowl from the elements. Further, the collar is coated for protection from the elements. The light fixture can be attached to a ground spike or attached to a standard sized pipe thread.
